Tutorials For OpenOffice

# Restart A Presentation Automatically

You can make your Impress presentations restart automatically after a specific time which you set. This is useful if you have, for example, a stand set up at a trade show. You might also create a small presentation for use before a main event and have it playing before the event starts.

You make your presentation automatically restart as follows:

Activity	*Explanation*
1. Click on **Slide Show – Slide Show Settings.**	
2. Under the **Type** choose **Auto.**	
3. Then set the time in Seconds. This will be how long it takes before the slide show restarts.
